DISEASE: Defects in ACADVL are the cause of very long chain acyl-cCAA dehydrogenase deficiency (VLCAD deficiency) [MIM:201475].
VLCAD deficiency is an autosomal recessive disease which leads to impaired long-chain fatty acid beta-oxidation. It is clinically heterogenous, with three major phenotypes: a severe childhood form, with early onset, high mortality, and high incidence of cardiomyopathy; a milder childhood form, with later onset, usually with hypoketotic hypoglycemia as the main presenting feature, low mortality, and rare cardiomyopathy; and an adult form, with isolated skeletal muscle involvement, rhabdomyolysis, and

                 dehydrogenases
  Mitochondrion (By similarity).
Acyl-CoA dehydrogenase, very-long-chain
myoglobinuria, usually triggered by exercise or fasting.
MISCELLANEOUS: A number of straight-chain acyl-CoA dehydrogens
of different substrate specificities are present in mammalian
  SIMILARITY: Belongs to the acyl-CoA dehydrogenase family.
